SECTION 4.0100. ESTABLISHMENT OF ZONES

The classification system used in the Clatsop County Comprehensive Plan was established and mapped as a management tool to implement the policies and intent of the Comprehensive Plan. The classifications are defined in the Land Use Planning Element of the Comprehensive Plan and the Development Patterns section of each of the Community Plans.

With each Plan classification, land use zones are established that are appropriate to carry out the intent and purpose of the Plan classification. The zone and district classification within each of the Comprehensive Plan designations for the County are shown in Table 4.1. The zone boundaries are as shown on the Clatsop County "Comprehensive Plan/Zoning Map" and Columbia River Estuary Resource Maps that in their present form are hereby adopted by reference. Where the abbreviated designation is used in this Ordinance, it has the same meaning as the entire classification title.

SECTION 4.1900. MARINE INDUSTRIAL SHORELANDS ZONE (MI)

Section 4.1910. Purpose and Areas Included

The purpose of the MI zone is to manage Columbia River Estuary shorelands in urban and urbanizable areas and shorelands in rural areas especially suited for water-dependent development and to reserve these shorelands for water-dependent industrial, commercial, and high-intensity recreational use. New industrial use building or buildings may not exceed 30,000 square feet of floor area, unless determined through further review that larger buildings will not exceed the carrying capacity of the land to provide adequate water and absorb waste. Expansion of an existing industrial use resulting in building or buildings exceeding 30,000 square feet of floor area are appropriate when the use will not exceed the carrying capacity of the land. Marine Industrial Shoreland areas have unique characteristics that make them especially suited for water-dependent development. Characteristics that contribute to suitability for water-dependent development include:

ARTICLE 4. ZONE REGULATIONS

SECTION 4.4000. LAKE AND WETLANDS ZONE (LW).

Section 4.4010. Purpose

The purpose of the LW zone is to assure the conservation of important shoreland and wetland biological habitats and conserve examples of different natural ecosystem types and to assure a diversity of species and ecological relations in Clatsop County.

Low intensity uses which do not result in major alterations are appropriate in this zone. Low to moderate intensity recreation is appropriate in coastal lakes.

This zone includes coastal and non-coastal lakes, significant non-estuarine freshwater marshes and important upland biological habitat.

The freshwater marshes in this district are of two categories: those designated under Goal 17 which were formed by coastal processes, and those designated under Goal 5.

Section 4.4020. Zone Boundaries

The zone shall be designated on the Clatsop County Land and Water Development and Use Ordinance zoning map, and shall conform to the 1" to 400' photocontour maps entitled "Significant Shoreland and Wetland Biological Habitats" on file at the Clatsop County Department of Community Development office and hereby adopted by reference.

Section 4.4030. Development and Use Permitted

The following developments are permitted under a Type I procedure subject to the applicable development standards:

 - 4) The size of the proposed facility, particularly that portion occupying the water surface, shall be the minimum required to meet the need. In this regard, new facilities shall make maximum use of dry boat moorage on existing shoreland areas.
 - 5) Means for preventing contaminants from entering the water shall be provided. Equipment shall be available on-site for clean-up of accidental spills of contaminants. Sewage, storm drainage and fish wastes shall not be discharged directly into the water.
 - 6) Marina facilities should provide for maximum public access and recreation use, consistent with safety and security considerations. Walkways, seating, fishing areas and similar facilities should be provided.
 - 7) Covered or enclosed water moorage shall be minimized, except as needed for maintenance, repair or construction activities.
 - 8) Marina facilities shall be located only in areas of existing shoreline development on the Necanicum River where its location would not eliminate marsh areas, and where water depths are sufficient so that new dredging is not required.

Piling

- 1) Piling for a use permitted in the estuary shall be approved only after the applicant has established that adverse impacts on navigation, estuarine habitat and processes, water circulation and sedimentation patterns, water quality and recreational activities are minimized.
- 2) The piling will meet with all state and federal engineering standards.
- 3) Pilings shall be used in lieu of fill wherever the use is engineering feasible. The number of pilings shall be the minimum necessary to accomplish the proposed use.

Restoration/resource enhancement - active

- 1) Conditional use applications for active restoration/resource enhancement should be accomplished by an explanation of the purpose of the project and the resource(s) to be restored or enhanced. The project shall be allowed only if consistent with the resource capabilities and purpose of the designation of the area and the other adjacent uses.

ARTICLE 4. ZONE REGULATIONS

- 2) Aquaculture shall be evaluated under those standards.

Shoreline stabilization

- 1) General standards.
 - (A) Preferred methods.
 - 1) Property management of existing streamside vegetation is the preferred method of stabilization, followed by planting of vegetation. Where vegetative protection is inappropriate (because of high erosion rate, the use of the site or other factors) structural means such as riprap may be used as a last resort.
 - 2) In the placement of stabilization materials, factors to be considered include, but are not limited to: effects on bird and wildlife habitat, uses of lands and waters adjacent to the bank, effects on fishing areas, effects on aquatic habitat, relative effectiveness of the various structures, engineering feasibility, cost and erosion, flooding and sedimentation of adjacent areas.
 - (B) Emergency repair to shoreline stabilization facilities is permitted, notwithstanding the other regulations in these standards, subject to those standards imposed by the State of Oregon, Division of State Lands and the U.S. Army Corps of Engineers.
 - (C) Conditional use application for shoreline stabilization shall be based on a demonstration of need and consistency with the intent of the designation of the area and the resource capabilities of the areas. Impacts shall be minimized.
- 2) Standards for revegetation and vegetation management.
 - (A) Plant species shall be selected to insure that they provide suitable stabilization and value for wildlife. Justification shall be presented as to the necessity and feasibility for use of a bank with a slope greater than 2:1 (horizontal to vertical). Trees, shrubs and grasses native to the area are generally preferred.
 - (B) The area to be revegetated should be protected from excessive livestock grazing or other activities that would hinder plant growth.
- 3) Standards for riprap.
 - (A) Good engineering and construction practices shall be used in the placement of riprap, with regard to slope, sizes, composition and quality of material, excavation of the toe trench, placement of a gravel fill blanket and operation of equipment in the water. State and federal agency regulations should be consulted in this regard.
 - (B) Riprapped banks should be vegetated to improve bird and wildlife habitat, where feasible.
 - (C) Shoreline protection measures shall not restrict existing public access to public shorelines.
 - (D) Shoreline protection measures should be designed to minimize their impacts on the aesthetic qualities of the shoreline.

ARTICLE 4. ZONE REGULATIONS

- (E) Bankline protection is not in itself a way to increase land surface area. Where severe erosion has occurred, fill may be used to obtain the desired bank slope and restore the previous bank line. Any extension of the bank line into traditional aquatic areas shall be subject to the standards for fill. Disruption of tidal marsh, tidal flat and productive subtidal areas shall not be permitted.
- (F) Construction of shoreline protection measures shall be coordinated with state and federal agencies and local interests to minimize the effects on aquatic resources and habitats. Relevant state and federal water quality standards shall be met. Stream channelization should be avoided.
- (G) Use of fill material for shoreline protection shall be permitted for maintenance of manmade structures existing as of October 7, 1977.

Utilities

- 1) Overhead electrical or communication transmission lines shall be located so as not to unduly interfere with migratory bird flyways and significant habitat of resident waterfowl, birds of prey and other birds. In cases of serious conflict, utility facilities should be located underground.
- 2) Applications for a utility facility, including cable crossings, shall provide evidence as to why an aquatic site is needed, the alternative locations considered, and the relative impacts of each. Crossings shall avoid disrupting marsh areas wherever it is engineering feasible.
- 3) Utility facilities shall not be located on new fill land unless part of an otherwise approved project and no other alternative exists.
- 4) Aboveground utility facilities shall be designed to have the least adverse effect on visual and other aesthetic characteristics of the area.
- 5) Effluents from point-source discharges shall meet all applicable state and federal water and air quality standards. Monitoring shall be carried out so as to determine the on-going effects on the estuarine environment.
- 6) After installation or maintenance is completed, banks shall be replanted with native species or otherwise protected against erosion. The pre-project bank line shall be maintained as closely as possible.
- 7) Storm water shall be directed into existing natural drainages wherever possible, and shall be dispersed into several locations so as to minimize the impact on the estuary. When adjacent to salt marshes and/or natural areas, special precautions shall be taken to insure contamination of the marsh by oil, sediment or other pollutant does not occur. This may be through use of holding ponds, weirs, dry wells, or other means.

ARTICLE 4. ZONE REGULATIONS

SECTION 4.4300. QUARRY AND MINING ZONE (QM).

SECTION 4.4310. PURPOSE.

The intent of this zone is to protect aggregate and other mineral sites from incompatible uses where such material is needed for primarily non-forest uses. Good quality aggregate and mineral sites are uncommon in the County and are vital to a healthy and growing economy. These sites should be protected from conflicting uses, primarily structures which would preempt an extractive resource use.

Section 4.4320. Application

The QM zone applies to sites shown by a "QM" letter designation on the County zoning map and described on a list in the Department of Community Development. Generally, sites are located to the nearest quarter section, although some sites are listed only by section, as per State Department of Geology and Mineral Industries permits. The QM District applies only to that portion of the listed section upon which the rock resource is located.

There are a number of existing and potential rock pits and stockpile sites which are not designated on the County map due to lack of adequate information concerning the sites. It is anticipated that many of those sites will be designated QM upon further information and a Goal 5 analysis and Comprehensive Plan amendment.
